

Soy Beverage and Goat's Milk in a Child Food Package

Changes were made to SPIRIT so that you would not have to check the FPIII box on the Health Data for a child to be able to receive soy beverage or goat's milk in the food package. To make sure you have the most recent reference data do the following:

- 1) Log into SPIRIT;
- 2) Right click on the "W" at the bottom right of your screen; and
- 3) Click on "Reset Local Reference Data".

You now should be good to go, but the next time you add one of these items to a child food package and it does not work, please contact Blair a bhendricks@mt.gov.

A prescription is still required to be able to issue the soy beverage or goat's milk to a child. You will be asked for the prescription information when you add the item to the food package.
